The Iowa Inheritance Tax and Elderly Migration

ISSUE

lowa imposes an inheritance tax on the beneficiaries of lowa estates. This *Issue Review* describes the primary features of the lowa inheritance tax, and attempts to view the tax in the context of the migration of lowa retirees.

AFFECTED AGENCIES

Department of Revenue and Finance for the administration of the law.

CODE AUTHORITY

Chapters 450 and 451, Code of Iowa

CURRENT SITUATION

Significant Features of Inheritance and Estate Taxes

Unlike the federal estate tax, the lowa inheritance tax is imposed on beneficiaries of lowa estates. The federal estate tax is imposed on the value of the estates themselves. The amount of the federal estate tax on a given estate is the same regardless of the number of beneficiaries. The State's inheritance tax can vary depending on the number of beneficiaries of a given estate as well as how each beneficiary is related to the deceased. For both federal estate tax and State inheritance tax purposes, there is no tax levied on a surviving spouse or qualified non-profit organizations.

The tax base for the State inheritance tax is somewhat smaller than the tax base for the federal estate tax, mostly due to a difference in the treatment of certain life insurance policies and pension plans. Likewise, the exclusion amount is considerably lower for State inheritance tax. Taxable estates less than \$600,000 are not subject to federal estate tax. Depending on the status of the beneficiaries, the State inheritance tax may be applied to the first dollar of the taxable estate.

Appendix 1, the "lowa Inheritance Tax Rate Schedule" from the Department of Revenue and Finance, displays how the inheritance tax is applied toward different classes of beneficiaries and estate sizes. **Table 1** summarizes the exclusion amounts and range of rates for different types of beneficiaries.

Table 1

Iowa Inheritance Tax Rate Schedule Summary

101141111	TOTTE TUX TRACE OF	nodalo odililiai y	
Type of Descendant	Exclusion Amount	Lowest Rate	Highest Rate
Spouse	All	N/A	N/A
Child	\$50,000	1.0 %	8.0 %
Other Lineal Beneficiaries*	15,000	1.0	8.0
Schedule B Beneficiaries**	0	5.0	10.0
Schedule C Beneficiaries	0	10.0	15.0
Schedule D Beneficiaries	0	15.0	15.0
Schedule E Beneficiaries	0	10.0	10.0
Schedule F Beneficiaries	0	5.0	5.0
Schedule G Beneficiaries	All	N/A	N/A

^{*}Other Lineal Descendants include parents, grandchildren, and other direct lineal descendants.

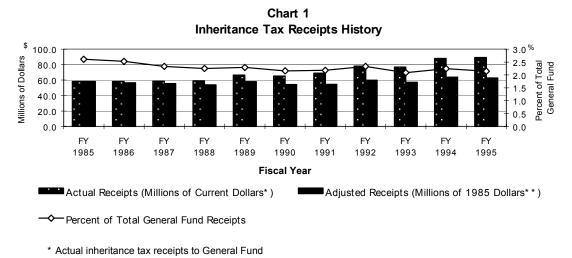

Budget Impact and Distribution of Tax Burden

The inheritance tax has been a stable source of revenue to the State General Fund over the last decade. Receipts to the General Fund totaled \$89.2 million in FY 1995, and represented 2.1% of total receipts. **Table 2** and **Chart 1** illustrate inheritance tax receipts to the General Fund from FY 1985 through FY 1995.

Table 2
Inheritance Tax Receipts to the State General Fund
FY 1985 through FY 1995

_Fiscal Year	Actual Receipts (Millions of Current Dollars*)	Adjusted Receipts (Millions of Constant Dollars* *)	Percent of Total General Fund Receipts
FY 1985	\$ 58.3	\$ 58.3	2.6 %
FY 1986	58.3	56.6	2.5
FY 1987	58.4	55.5	2.3
FY 1988	58.9	53.8	2.3
FY 1989	66.5	58.0	2.3
FY 1990	65.1	54.2	2.2
FY 1991	69.0	54.5	2.2
FY 1992	78.0	59.7	2.3
FY 1993	76.9	57.0	2.1
FY 1994	88.1	63.8	2.2
FY 1995	89.2	62.7	2.1

^{**}Schedule B beneficiaries consist of siblings, children-in-law, and stepchildren. See Appendix 1 for descriptions of other scheduled descendants.

** Adjusted by Consumer Price Index with FY 1985=100

Although data for total receipts are readily available, it is less clear how the inheritance tax breaks down according to estate size or income classification. Currently, the only data on distribution comes from a Department of Revenue and Finance analysis of a sample of inheritance tax returns for tax year 1991. The purpose of the sample analysis was to determine the impact of transforming the inheritance tax into an estate tax. As a result, many questions remain. The analysis did provide a breakdown of returns according to the relationship of the beneficiary. **Table 3** shows the resulting distribution.

Table 3
Distribution of Inheritance and Taxes Paid
by Type of Beneficiary

(Based on FY 1991 Sample by Department of Revenue and Finance)

	Percentage	Percent of Tax
Type of Beneficiary	Share Inherited	Paid Paid
Spouses	16.2 %	0.0 %
Children	56.6	31.5
Collateral Descendants	6.6	16.5
Grandchildren	6.1	4.7
Unrelated	14.5	47.4

Note:

Table 3 shows that only 16.2% of the aggregate value of estates was inherited by a surviving spouse. This data only reflects filed returns. Returns are rarely filed for estates which have the spouse as the sole beneficiary, so the percentage share column can only be viewed in the context of those returns that have non-spouse beneficiaries. Nonetheless, **Table 3** points to the fact that unrelated beneficiaries account for nearly half of all inheritance tax receipts. This is due to the rate schedule which imposes a larger tax on distantly related and unrelated beneficiaries.

From the Department sample, it was also impossible to ascertain how much of the tax is paid by nonresidents of the State. Since the tax is levied according to the residence of the deceased (or the residence of the property of the deceased) much of the tax is actually being remitted by beneficiaries who don't reside in Iowa. In this sense, the inheritance tax may be much more "exportable" than most other taxes that State and local governments utilize.

Although it is not possible to determine the nature of the estates' assets from the 1991 sample, it may be possible from a new sample. Answers to the following questions might be ascertainable from a new sample.

- How much of the inheritance tax is paid due to bequests of land?
- How much of the inheritance tax is paid due to bequests of small businesses?
- To what extent have inherited assets been previously subjected to income taxes by the deceased?
- What percentage of inheritance tax receipts are remitted by nonresidents of the State?

These issues, as well as a general distribution analysis, are currently being examined by the Department of Revenue and Finance. Members of the General Assembly will be informed when that material is made available.

Federal "Pick-up"

The federal government allows a state death tax credit, which is commonly referred to as a "pick-up" or "sponge tax." The federal pick-up is a tax credit that can be applied toward the payment of death taxes to any of the 50 states. Iowa law requires that the greater of either the inheritance tax or the pick-up tax be paid to the State. Thus, if the pick-up exceeds the inheritance tax computation, then the taxpayer remits the amount of the pick-up. The taxpayer receives a credit equal to the amount of the pick-up on the federal return.

Tables 4 and 5 represent simplified computations of the pick-up tax. In **Table 4**, it is assumed that one child receives the entire estate. **In Table 5**, it is assumed that four children split the estate equally. In each case the effect of the pick-up is shown for estates of six different sizes. For ease of presentation, these examples assume that the tax base for the inheritance tax and the federal estate tax are identical, which will not often be the case.

Table 4
Computation of Pick-up Tax for Estate With One Beneficiary
(One Child Receives Entire Estate)

				10110	Olina Receive	O LIILII	Locust	<u> </u>	
N	et Estate				state (Net of		eral		State Tax in Excess of
	Size*	<u>Federa</u>	<u>I Tax</u>	Fed	Tax)* *	Pick	(-up	State Tax	Pick-up
\$	250,000	\$	0	\$	250,000	\$	0	\$ 11,825	\$ 11,825
	500,000		0		500,000		0	31,825	31,825
	750,000	5	5,500		714,900	2	20,400	49,017	28,617
	1,000,000	15	3,000		880,200	3	3,200	62,241	29,041
	2,000,000	58	8,000		1,511,600	9	9,600	112,753	13,153
	3,000,000	1,09	8,000		2,084,000	18	32,000	158,545	0

^{*}Net Estate Size is the gross estate net of expenses.

^{**}State Estate (Net of Federal Tax) equals the Net Estate Size minus Federal Tax plus Federal Pick-up.

Table 5
Computation of Pick-up Tax for Estate With Four Beneficiaries
(Four Children Receive Equal Shares of Entire Estate)

					Estate (Net of	Fed				State Tax in Exce	ess of
Net	Estate Size	<u>Federal</u>	Tax	F	ed Tax)	Pick	(-up	State	Tax	Pick-up	
\$	250,000	\$	0	\$	250,000	\$	0	\$	800	\$	800
	500,000		0		500,000		0	1	1,300	11,	300
	750,000	5	5,500		714,900	2	20,400	2	5,343	4,	943
	1,000,000	15	3,000		880,200	3	3,200	3	7,716	4,	516
	2,000,000	58	8,000		1,511,600	9	9,600	8	8,228		0
	3,000,000	1.09	8.000		2.084.000	18	32.000	13	4.020		0

These computations are useful in analyzing the effect of lowa's inheritance tax on beneficiaries of large estates. The federal pick-up tax rate schedule (**Appendix 2**) is such that the top pick-up rate exceeds the top inheritance tax rate. Thus, for very large estates (for which children are beneficiaries), there is no unique burden associated with the lowa inheritance tax. Owners of very large estates who choose to move to other states will find that very little, if any, of the inheritance tax will be avoided. The tax will simply be paid to another State or the federal government.

The pick-up in Iowa accounted for \$14.5 million in revenue in tax year 1992 and \$17.0 million in revenue in tax year 1993. This is the amount that would be retained if the inheritance tax were repealed.

SITUATION IN OTHER STATES

lowa is one of 18 states that impose an inheritance tax. An additional six states levy an estate tax. Three bordering states (Missouri, Nebraska, and South Dakota) impose an inheritance tax. All States and the District of Columbia levy a tax at least equal to the federal pick-up tax. The reason for this is quite simple. If a state chose to abolish the pick-up, the taxpayer would pay that much more to the federal government.

Appendix 3 is a page from the <u>Statistics of Income Bulletin</u> published by the Internal Revenue Service (IRS) for tax year 1993, and shows the value and number of taxable estates as well as the value of the pick-up for each state.

RECONCILING ELDERLY MIGRATION AND STATE INHERITANCE TAX POLICY

This section of the *Issue Review* addresses the effect of the State inheritance tax on the location decisions of elderly taxpayers.

There are three aspects to this analysis:

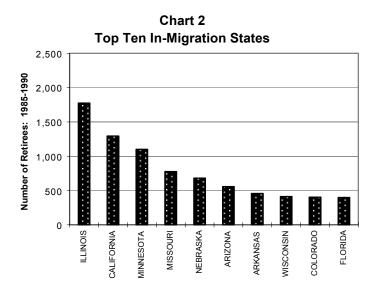

- How many elderly lowans leave the State and where do they go? How many elderly taxpayers
 move to lowa and where do they come from? Answers to these two questions provide net
 migration numbers which describe lowa's elderly migration trends.
- What factors might help to explain why elderly lowans choose to relocate to other States? To what extent does the inheritance tax play a part?
- To what extent can elderly migration affect the overall death tax burden of the beneficiaries of affected estates?

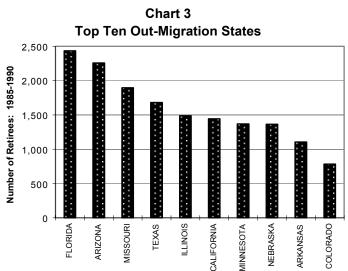

Elderly Migration Trends

Data for elderly migration was created by the U.S. Census Bureau. The Census Bureau utilized sampling techniques to develop the data. The goal was to capture all people over the age of 60 who said they had moved in the last five years (1985 through 1990). **Table 6** (on page 7) shows how many people in this demographic group moved to lowa and how many lowans moved to other states or the District of Columbia. Major elements of **Table 6** are as follows:

- Overall, Iowa lost 20,962 retirees to other states, but gained 11,669 retirees from other states. The net migration (in-migration less out-migration) was -9,293 over the five-year period.
- Four states accounted for approximately 66.1% of the net migration loss: Florida, Arizona, Texas, and Missouri.
- Of lowa's bordering states, net migration was positive in only one state: Illinois. It should also be noted that lowa received more retirees from Illinois than from any other state (1,775). Illinois accounted for approximately 15.2% of all retirees who moved to lowa, and 7.1% of all lowa retirees who moved elsewhere.

Charts 2 and 3 illustrate in-migration and out-migration by state.

¹ In a strict sense, these individuals may or may not be "retirees". For the purpose of this *Issue Review*, "retirees" refers to individuals over the age of 60 that relocate from one state to another state.

Factors Used to Explain Elderly Migration

There are many reasons why lowa retirees decide to leave the State. This *Issue Review* isolates six factors (in addition to inheritance tax) that might reasonably considered to be correlated with elderly migration in an effort to determine if inheritance tax is a significant cause. ² The factors are described as follows:

- Weather Expressed as the state average mean temperature.
- Pension Taxes Collapsed into three groups: States with no special exclusions, states with partial exclusions, and states that do not tax pension income.
- Property Taxes Statewide property taxes expressed as a percentage of personal income.
- Income Taxes Personal income taxes expressed as a percentage of personal income.
- Social Security Taxes Collapsed into two groups. Those states that tax social security income and those states that do not.
- Inheritance Taxes Collapsed into two groups. Those states with an estate/inheritance tax in addition to the federal pick-up and those without an additional tax.

These variables were used in a multiple regression equation to determine how they affected net migration.³ Overall the model explained 45.2% of the variance in net migration. The weather proved to be the most significant variable. All of the variables were statistically significant with the exception of inheritance taxes,.

When inheritance tax was omitted from the model, the statistical performance of the model improved. This indicates that net migration can be better explained without considering inheritance tax

Benefit of Elderly Migration to Beneficiaries

The results of this analysis need to be viewed in the context of a beneficiary's gain in the event that a benefactor moves to a state with no inheritance tax. As pointed out earlier, the federal pick-up exceeds the inheritance tax for large estates. Thus, in the case of one child receiving an entire estate, little or nothing would be gained by relocating if the estate exceeded \$2.0 million.

In the case of land and properties, the assets would have to be sold to avoid the tax. For example, if a Florida resident inherits lowa farmland owned by a California resident, inheritance tax would have to be paid to the State of Iowa. If the benefactor converted the land or property to cash, the inheritance tax would be avoided, but the sale would be subject to tax on capital gains. Compared to most other taxes on individuals, the inheritance tax is much more difficult to avoid by locating to other states.

² Other variables considered include per capita personal income, overall crime rate, violent crime rate, and per capita tax variables. Explanations of these variables and the reasons for their omission is available upon request. Also available is a more detailed explanation of the listed variables, including sources, dates, and rationale for inclusion.

³ The purpose of this linear regression was to determine the effect of states' inheritance tax policies on their ability to attract lowa retirees. To accomplish this goal, other relevant factors had to be taken into account. This is not an attempt to ultimately explain why lowa retirees relocate to other states; only if inheritance tax policy is significantly correlated with location decisions. Least-squares estimates were used. An analysis of variables with statistical measures is available upon request.

Gross estate is shown at the value used to determine estate tax liability. The value could be determined as of date-of-death or 6 months thereafter (i.e., atternate valuation

method).

* U.S. citizens domiciled abroad.

NOTE: Detail may not add to totals because of rounding.
